

MOBIE AI ON-PREMISE

ONEDU LMS

Mobie On-Premise AI Machine

Secure, Local, and Built for Education

Empower your institution with a fully offline AI solution — no internet connection, no data risks. On-Premise AI Machine developed by Finnish company Mobie, offers a high-performance, closed learning environment tailored for schools and educational organizations.

Why On-Premise AI?

AI tools online raise privacy concerns and often require user accounts, age verification, and complex data agreements. With Mobie's local solution, all data stays within your institution — nothing is transferred online.

AI models are trained using your own material, making them highly relevant and secure. And, you retain full control over what is stored, shared, or deleted.

Mobie's on-premise AI is suitable from compact microcomputers for classroom use to powerful school-wide servers supporting multiple users. We also provide secure WLAN environments that allow AI to be safely accessed on phones, tablets, and computers — even in demanding contexts like the Finnish matriculation examination.
